IMPROVING DEVELOPER EXPERIENCE (DX) WITH DOCKER

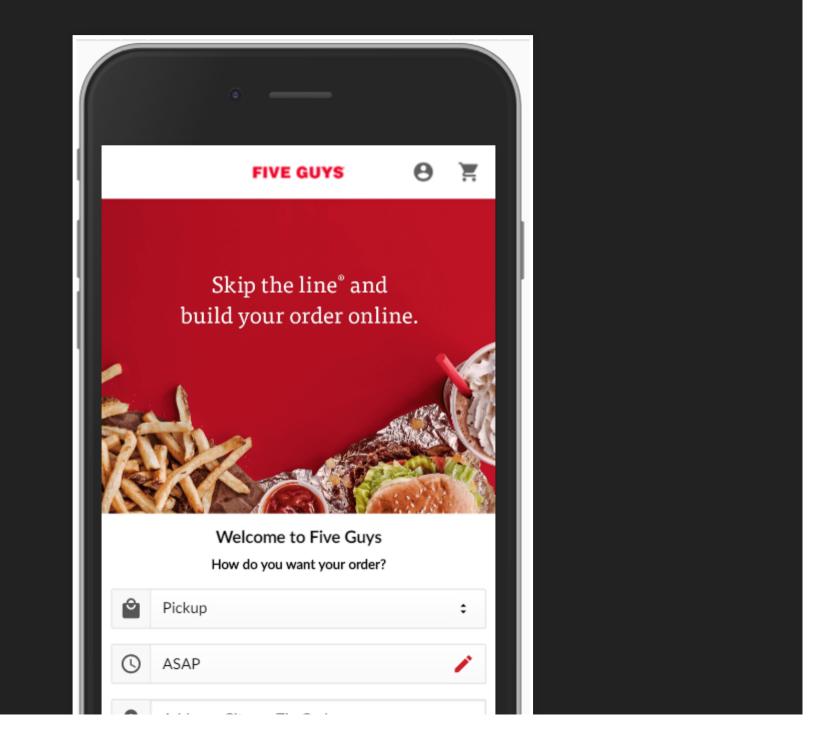

DOCKER'S AWAKENING DX

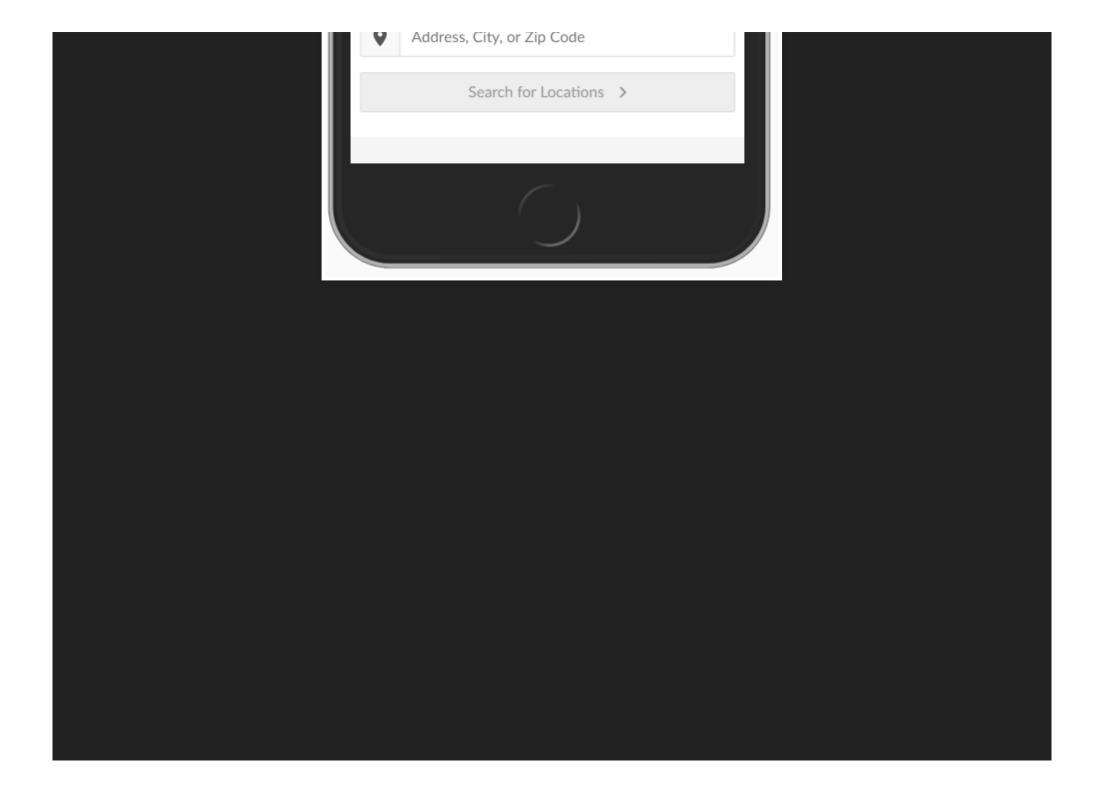

THE LEGEND OF /(/(N((N/)))): DX

According to Aaron (1.5 years old)

DUSTIN MASTERS

Senior Software Engineer, Olo

SLOW BUILDS ARE THE WORST

REBUILDS TOOK OVER 6 SECONDS ON AVERAGE BETWEEN CHANGES

When not running as admin, could be as slow as 30 seconds, because symlinks..

JAVASCRIPT BUILDS ACCESS LOTS OF FILES

SILICON SATIRE

What Happened When I Peeked Into My Node_Modules Directory

Just absolute madness

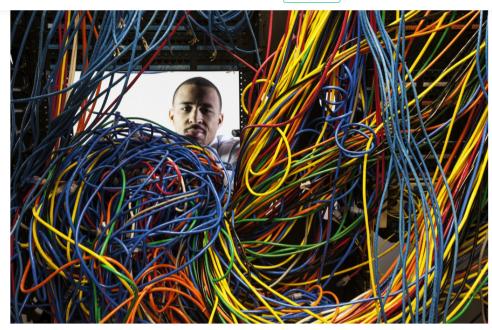

Photo: Mint Images/Getty Images

he left-pad fiasco shook the JavaScript community to its core when a rouge developer removed a popular module from npm, causing tens of projects to go dark.

While code bloat continues to slow down our websites, drain our batteries, and make "npm install" slow for a few seconds, many developers like myself have decided to carefully audit the dependencies we bring into our projects.

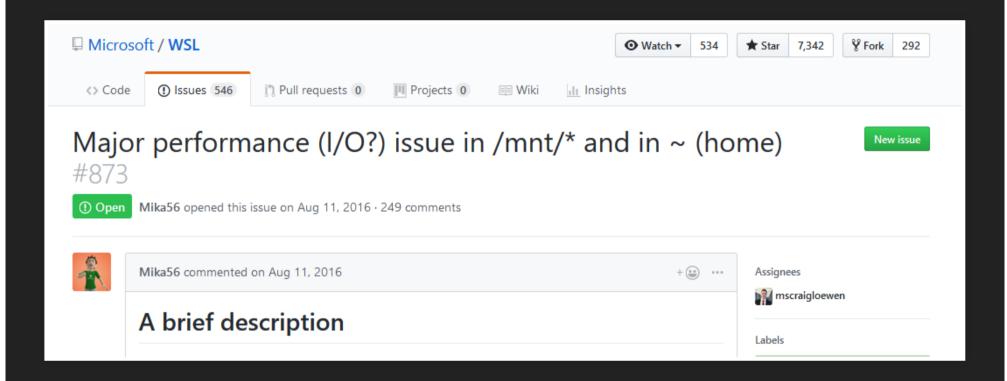

ROOT PROBLEM

Our Ember build creates a *lot* of temporary files

FILESYSTEM ACCESS ON WINDOWS CAN BE SLOW

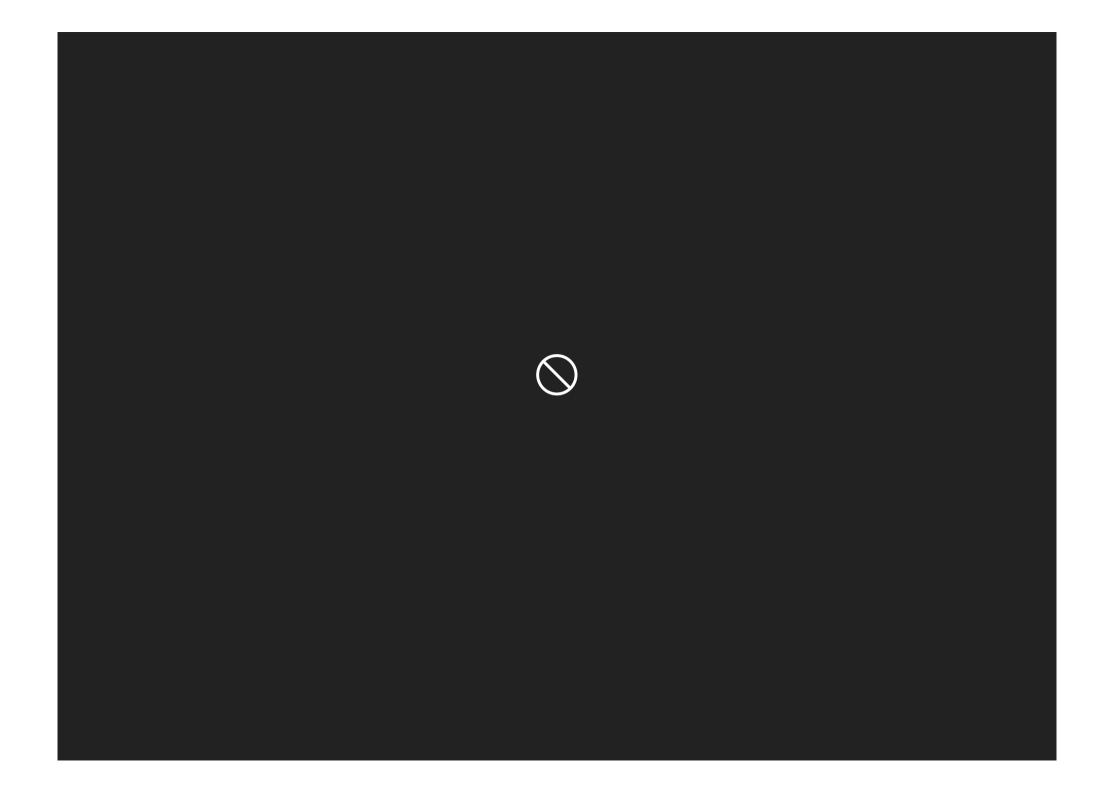

Even with WSL, NTFS is still used behind the scenes via DrvFs

https://github.com/Microsoft/WSL/issues/873

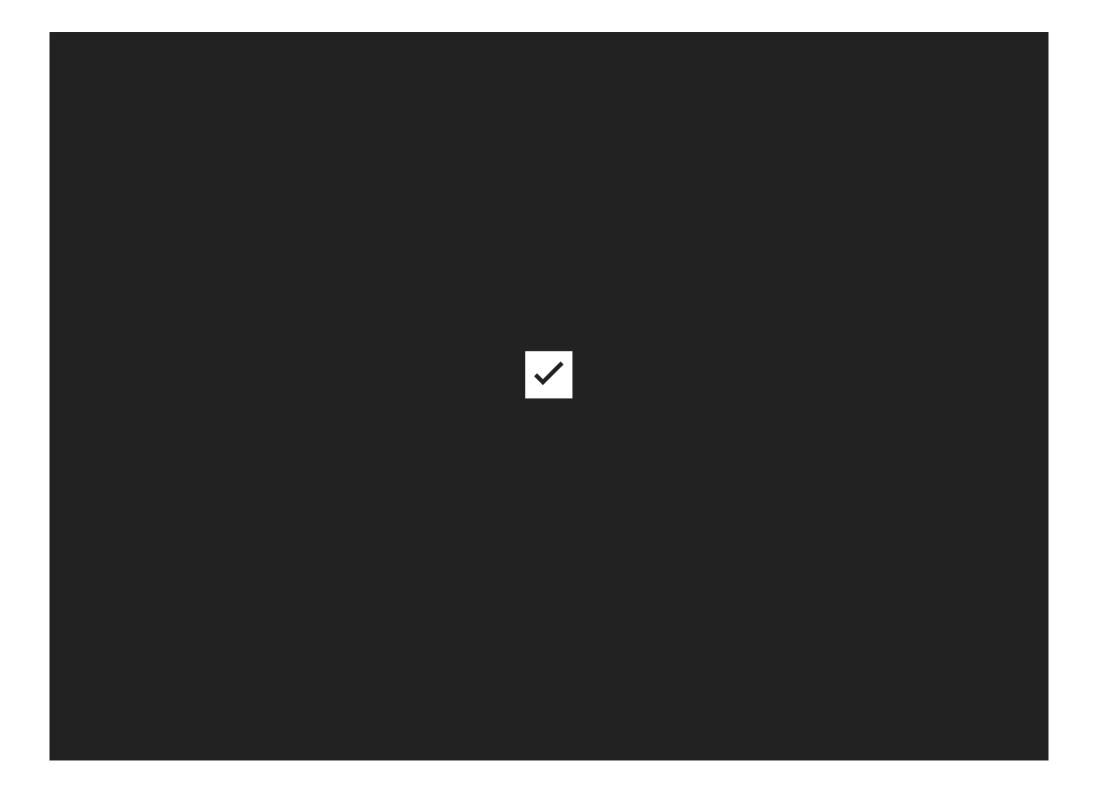

WHAT IF WE USED THE BLOCKCHAIN?

WHAT IF WE USED CONTAINERS?

PERF TEST ON A VM

Native: 78s build, 6s rebuild

Container: 45s build, 2s rebuild

OTHER BENEFITS

- Consistent build environment
- Multiple containers can be linked

NEW PROBLEM: KEEPING THE FILES IN SYNC

Docker does not notify mapped volumes that data has changed

DOTNET TOOL TO THE RESCUE

https://github.com/dustinsoftware/Docker-Volume-Watcher

dotnet install --global
 DockerVolumeWatcher

AUTOMATION IS 🔍

yarn docker-start boots up all the containers and does sanity checks

```
